                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a proteins are useful for identifying compounds that modulate their compounds that modulate expression of the polymucleotide sequences. The activity and production, and the cell is also useful for identifying compounds that modulate expression of the polymucleotide sequences of compounds the secreted proteins. The sequences of the invention are useful for identifying encoding the secreted proteins. The sequences of the invention are useful for intending diseases such as hyperproliferative disorders (e.g. cancer), (SCID)), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammacry disorders (e.g. arthritis) and the invention are also useful in gene therapy. AAS62214-AAS62838 arrared anchesing sequences of the invention that encode for novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Zebrafish, PTHIR receptor; PTH3R receptor; diagnosis; cancer;

The invention describes an isolated nucleic acid (I) comprising a polynuclectide having a nuclectide sequence chosen from nuclectide sequence encoding a parathyroid hormone (PTH)/PTH-related peptide (PFHrP) receptor (PTHIR receptor) having a fully defined sequence of 536 amino acids as given in the specification, PTHIR receptor, mature PTHIR receptor, PTHIR extracellular or transmembrane domain, and their complement. (I) is useful for diagnosing and treating decrease in the standard or normal level of PTHIR receptor activity in an individual, and for chromosome identification. This sequence encodes zebrafish PTH3R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acids encoding parathyroid hormone receptors PTH1R and PTH3R,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Zebrafish; parathyroid hormone type-3 receptor; PTH3R;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                          The present sequence is the parathyroid hormone type-3 receptor (PTH3R) coding sequence from the zebrafish. It was obtained by sequencing a CDNA clone. The gene and protein can be used to detect diseases in man where the receptor is either overexpressed or underexpressed, and they can be used to treat these diseases, which may be developmental, physiological or neurological disorders. They can also be used to identify agonists and antagonists which can be used in a similar manner. In addition, the gene can be used for chromosome identification. Zebrafish, parathyroid hormone, PTH, parathyroid hormone related protein, PTHrP, parathyroid hormone related protein receptor; PTH1R, PTH3R, diagnosis, prognosis; pharmaceutical composition; chromosome assay, gene,
                              acide as given in the specification, PTHIR receptor, mature PTHIR exceptor, PTHIR extracellular or transmembrane domain, and their complement. (I) is useful for diagnosing and treating decrease in the standard or normal level of PTHIR receptor activity in an individual, for chromosome identification. This sequence encodes zebrafish PTHIR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel parathyzoid hormone (PTH) and parathyzoid hormone related protein (PTHrE) receptors PTHIR and PTHIR isolated from zebrafish. The invention is useful in the diagnosis and prognosis of certain diseases and disorders that express significantly decreased levels of PTHIR and PTHIR. The invention is also useful in preparaing pharmaceutical compositions and in chromosome assays. The present sequence is zebrafish PTHIR CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New parathyroid hormone receptors designated PTHIR and PTH3R isolated from zebrafish are useful to diagnose and treat parathyroid hormone

                                                                The present sequence is the parathyroid hormone type-3 receptor (PTH3R) coding sequence from the zebrafish. It was obtained by sequencing a cDNA clone. The gene and protein can be used to detect diseases in man where the receptor is either overexpressed or underexpressed, and they can be used to treat these diseases, which may be developmental, physiological or neurological disorders. They can also be used to identify agonists and antagonists which can be used in a similar manner. In addition, the gene can be used for chromosome identification. (Updated on 15-SEP-2003 to

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a live to the protein, and a blochip comprising CA nucleic acid or Exagments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protomonocogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence carcinoma (especially preast cancer, prostate cancer, lymphoma or tissues. CA nucleic acids, proteins and antibodies are also useful as thereapeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed murine CA nucleic acid sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed sequence data for this cancer.

Mouse mCG2257 gene genomic DNA sequence.

(first entry)

20-NOV-2003

ADA66361;

cell;

This invention relates to a novel recombinant carcinoma-associated (CA) nucleic acid comprising a fully defined genomic, mRNA or coding sequences of mouse Rorc gene or human RORC gene, mouse mCG15938 or human gene BAT1, mouse lagapi gene or human IQGAPI gene, mouse Zpf29 gene or human CGAPI, gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse RCA19 gene or human hCGAPI gene, mouse repeated in cancer cells, preferably lymphatic, breaat, prostate or epithalial cells. A compound which modifies the expression of the CA genes or bind to carcinoma-associated proteins (CAP) may have cytostatic activity and the sequences of the invention may enable the use of gene therapy or a development of an anticancer vaccine. Therefore the invention may be useful for diagnosis and treatment of carcinomas, especially lymphoma carcinoma, breast cancer and prostate cancer. The CA genes may also be useful as DNA vaccines and for generating animal models of carcinomas. The present sequence is that of the mouse mCG2257 gene genomic DNA sequence of the invention. Sequence 90442 BP; 21913 A; 21998 C; 23663 G; 22868 T; 0 U; 0 Other; 

Novel recombinant carcinoma-associated nucleic acid, useful for evaluating the effect of a candidate carcinoma drug, and for diagnosing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                          New recombinant nucleic acid, useful for treating carcinomas, lymphomas, cancers, neoplasm, adenocarcinoma, or sarcomas.

The present invention relates to novel carcinoma associated (CA) nucleic discloses a recombinant nucleic acid comprising a fully defined PR domain protein 11 (PRDM11 - a carcinoma-associated gene) nucleotide sequence. The sequences of the invention are useful for identifying compounds that potentially useful in treating carcinoma associated protein (CAP) which are conditions that may be diagnosed or treated according to the invention carcinoma. Among the diseases and are cancers such as adenocarcinoma, breast cancer, inflammatory carcinoma, paget's disease, etc, aging, and neurodegenerative diseases.

The present sequence represents a CA nucleic acid sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel recombinant carcinoma-associated gene, PRDM11 useful for diagnosing cancer, and for screening for agents for treating cancers and neurodegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ds; gene; CA gene; carcinoma associated gene; cytostatic; cancer;

The invention relates to plant derived polynucleotides capable of regulating expression of at least one polynucleotide sequence operably linked to it. The invention also relates to a nucleic acid construct comprising the isolated polynucleotide, a transgenic cell comprising the isolated polynucleotide or nucleic acid construct, a transgenic organism comprising the isolated polynucleotide or nucleic acid construct, a producing a transgenic plant comprising transforming the plant with the polynucleotide or nucleic acid construct, a method of expressing a producing a transgenic plant comprising transforming the plant with the polyneptide of interest in a cell construct a method of expressing the nucleic acid construct thus expressing two polypeptides of interest in the cell, and a method of co-expressing two polypeptides of interest in a cell comprising transforming the cell with a nucleic acid construct including two polypeptides of interest in a cell comprising transforming the cell with a nucleic acid construct including two polypeptides of interest in a cell comprising transforming the cell with a nucleic acid construct including two polypeptides of interest in a regulatory nucleic acid sequence. The cell interest poprable of interest in construct interest poprable of interest in cell with the polypeptides of interest in a regulatory nucleic acid sequence. The coll interest in transforming transforming the polyperice of interest in capable of directing transforming of at least one polymolectide sequence in a cell interest in the cell interest in the cell interest in construct in construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exogenous polynucleotide sequences in plants. This sequence represents an Arabidopsis thaliana DNA regulating element (DRE) used in the scope of
                                                            New isolated polynucleotide that is a DNA regulating element, capable of regulating expression of at least one polynucleotide sequence operably linked to it, useful for directing expression of exogenous polynucleotide sequences in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         directing transcription of at least one polynucleotide sequence in a constitutive, inductive, tissue specific or developmental stage specific manner. The polynucleotides are useful for directing expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drosophila; developmental biology; cell signalling; insecticide;

                                                                                                                                                                                                                                                                                                                                                       carcinoma associated, gene) appearing as ADL27113-ADL2717. Also included are a host cell comprising the recombinant nucleic acid or expression vector, an expression vector comprising the recombinant nucleic acid, a recombinant protein (a carcinoma associated protein) comprising the recombinant protein (a carcinoma associated protein) comprising the sequence encoded by the nucleic acid, a method for screening for a bioactive agent capable of candidates, a method for screening for a bioactive associated binding to (or modulating the activity of a carcinoma associated carcinoma associated protein, a method of diagnoshing carcinoma associated protein, a biophy comprising the effect of a carcinoma associated carcinoma associated protein, a method of diagnosing carcinoma or propensity to carcinoma carcinoma associated protein, a biophy comprising one or more nucleic acid, a method of diagnosing carcinoma or propensity to carcinoma and a method of determining carcinoma associated gene copy number. The nucleic acid, a useful for preparing a composition for diagnosing or treating carcinoma especially lymphomas. The present sequence is the creating carcinoma associated gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention slisloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01640-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions. double-stranded cDNA was ligated to a DraIII adaptor (GGCCUACUGG), digested and directionally cloned into distinct braIII sites of the pMEISS-FL3. Library was size selected for 1.0 kb, with a average insert size of -1.2kb. Library constructed by Yutaka Suzuki (University of Tokyo Institute of Medical Science). Clustom primers recommended for sequencing: S' end primer 5'-GGANGTTGCCTTTACTTCTA-3' and 3' end primer 5'-CGANGTGCAGCTGCAGCACA-3'. Note: This is a Zebrafish Gene Collection (ZGC) library"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mus musculus molossinus

Clones are derived from the porcine BAC library RPCI-44
(http://www.bacpac.chori.org/porcine242.htm). For BAC library
availability, please contact Pieter de Jong (pdeJong@chori.org).
Glones may be purchased from BACPAC Resources
(http://BACPACorders.chori.org). This work was undertaken as part
of the International Swine Genome Sequencing Consortium by
University of Illinois at Urbana Champaign, USA with funds provided
by grant No. AG2002-34480-11828 from USDA-CSREES and
AG201-35205-09965 from USDA/NRI (Livestock Genome Sequencing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases I to 542) Mahairas, G.G., Wallace, J.C., Smith, K., Swartzell, S., Holzman, T., Keller, A., Shaker, R., Furlong, J., Young, J., Zhao, S., Adams, M.D. and

Rice is the most important food_crop in the world. Half of
Rice is the most important food_crop in the world. Half of
the world population, especially those inhabiting highly
populated areas of the humid tropics and subtropics, rely
on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a
haploid genome equivalent of 431 Mbp (Arumuganathan and
Earle. 1991) The relatively small genome of rice, three
times larger than that of Arabidopsis, makes it suitable
for genomic studies. In order to facilitate positional
clouing, physical mapping and genome sequencing of rice,
we have constructed a BAC library from Oryza sativa,
Nipponbare variety using EcoRI as the cloning enzyme. The
library contains 55,296 clones with an average insert size
of 121 Kb providing approximatley 15 haploid genome
equivalents. The deep coverage allows the isolation a
particular sequence with a probability of 99.9 %. Three
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oryza sativa (japonica cultivar-group)

```
/ULDIE="Vector: paluescript KS+; Site_1: ECORI; Site_2:
Not1; PolyA(+) RNA was prepared using the QuickPrep Micro
mRNA Purification Kit (Amersham Pharmacia Biotech).
Synthesis of the cONA first strand was done with
Superscript II reverse transcriptase (Gibco BRL) and an
oligo-dT-Not primer (5'-CTGCGCGCGT(18)-3'). Synthesis of
the CDNA second strand was performed using the Klenow
fragment of DNA polymerase with a spliced leader (SL)
primer (5'-GATACAGTTCTGTA-3'). After methylation with
ECORI methylase, phosphorylated Ecori linkers
(5'-ACGGATTCTGTA-3') were ligated to the cDNA. The
resulting CDNA mixture was then digested with NotI and
ECORI restriction enzymes, subjected to size fractionation
on SizeSep400 Spun Columns (Pharmacia) to select fragments
longer than 400 bp, and cloned into the dephosphorylated
NotI/ECORI sites of the vector."

Bequences were basecalled with phred and vector was masked with

crossmatch (see http://www.phrap.org). Sequences were then trimmed

from both ends to remove low quality bases and masked vector.

Bmail: allen sessions@syngenta.com
BRC Stock Number C8934911, T-DNA left border flanking sequences of
Syngenta Arabidopsis Insertion Library (SAIL) lines are available
through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not
class: TDNA tagged.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EST 10-MAY-2001

Sequence 2, Application US/08911434A

Patent No. 595976

GENERAL INFORMATION:

APPLICANT: TORIKAL: Satomi
APPLICANT: OEDA, Kenji

TITILE OF INVENTION: PLANT PROMOTER AND UTILIZATION THEREOF

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSE: BIRCH, STEWART, KOLASCH & BIRCH, LLP

STREET: P.O. BOX 747

CITY: FALLS CHURCH

STATE: VIRGINIA

COMPUTRY: UNITED STATES OF AMERICA

ZIP: 22040

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

USOUL 14608/C

Sequence 14608, Application US/09949016

Patent No. 6812339
GENERAL INFORMATION:
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FREESE FASTS OF WINDOWS VERSION 4.0
SEQ ID NO 14608
LENGTH: 256287
APPLICANT: Jopner, Harald
APPLICANT: Rubin, David A.

TITLE OF INVENTION: PTHIS and PTHIS Receptors, Methods and Uses Thereof
FILE REPERENCE: 0609.474001/SRL/M-G
CURRENT APPLICATION NUMBER: US/09/449,632
CURRENT PILING DATE: 1999-11-30
PRIOR APPLICATION NUMBER: US 60/110,467
PRIOR PILING DATE: 1998-11-30
SOFTWARE: PATENTING DATE: 25
SOFTWARE: PATENTING DATE: 22.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 4; Length 2152;
                                                                                                                                                                                                                                                                                                                 TYPE: DNA

ORGANISM: zebrafish
FRATURE:
FRATURE:
IOCATION: (394)..(2019)
NAME/KEY: misc feature
LOCATION: (2125)..(2125)
OTHER INFORMATION: n is any nucleotide of a,t,g or use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 62.0%; Score 18.6; DB 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Weacher 134, Application US/08651155B

Sequence 134, Application US/08651155B

Sequence 134, Application US/08651155B

Sequence 134, Application US/08651155B

Sequence 134, Application is a Sequence 134, Application in Applicant: Mahan Dr., Michael J.

APPLICANT: Conner Mr., Christopher P.

APPLICANT: Conner Mr., Christopher P.

APPLICANT: High of INVENTION: METHOD AND PROBES FOR THE IDENTIFICATION

TITLE OF INVENTION: OF MICROBIAL GENES SPECIFICALLY INDUCED DURING HOST

TITLE OF INVENTION: INPECTION

NUMBER OF SEQUENCES: 255
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 813, Application US/09902540

NESON-949-001-31/C

Sequence 31, Application US/09949001

Sequence 31, Application US/09949001

Patent No. 6825336

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH OSTEOPOROSIS, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH OSTEOPOROSIS, METHODS OF DETECTION AND USES THEREOF

CURRENT APPLICATION NUMBER: US/09/949,001

CURRENT APPLICATION NUMBER: 60/231,323

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 848

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 31

LENGTH: 312957
                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 8013, Application US/10027632
Publication No. US20020198371A1
GENERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
FITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129
CURRENT APPLICATION NUMBER: US/10/027,632
CURRENT FILING DATE: 2002-04-30
                                                                                                                                                                            .;
